- 5 year warranty
- Manufactured in USA

Description

The SX9700 is a new digital player, designed to provide a practical and economical yet easy to update solution in a continuous play audio source for message and music on hold applications.

This device delivers outstanding audio quality storing recordings on a non-volatile internal flash memory. Unlike other flash based products that compress the audio, audio is recorded directly into solid state memory in it's natural, uncompressed form providing superior quality voice and music.

This model has a built-in smart “audio feed” recording capability that records the unit automatically by simply playing the MP3 or wave audio file. There is no user involvement, no buttons to press, no software drivers to install, no USB ports to find and no PC operating systems to worry about. This is the same process already used to get approval on a production. For users less computer savvy or with no email access, a CD can always be mailed.

SX9700 provides a cost effective, easy to use & easy to update solution for message on hold applications.
